GitHub

Integration tools (**CI/CD**)

Jenkins

Operating System

Windows

Personal Details

Languages: English, Telugu

Current Location: Hyderabad

Frameworks

Cucumber,
TestNG,
Data Driven
Page Object Model (**POM**)
Behavior-Driven Development (**BDD**)
Hybrid framework

EDUCATION

BCom - Govt **degree(A)** College

Role - QA engineer

Project: PAB Jobs

Description: PAB Jobs is a job portal offering features like customized alerts, application instructions, and filters. Job seekers can register, search for jobs, and match their qualifications, while employers can post vacancies. Job portals simplify hiring by allowing recruiters to post ads, search resumes, and save time and costs.

Responsibilities:

- Writing and Reviewing Test scenarios, Test cases, Executing the test cases and coordinating with developers in fixing the issues reported during sprints / releases.
- Authored and executed test cases for functional and regression testing.
- Conducted smoke, sanity, and retesting across multiple sprints.
- Logged and tracked defects using JIRA and collaborated with developers for fixes
- Sending daily and weekly status reports.
