WORK EXPERIENCE

Associate
Cognizant Technology Solutions

02/2022 - Present   *Client :The ING Group*

Tasks

- Develop microservices for migrating from a legacy monolithic system (written in Perl and C#) to a more flexible, scalable microservices architecture.
- Maintain 12 batch jobs for processing customer transactions, ensuring accurate data storage in Oracle and real-time accessibility via REST APIs.
- Expose APIs for both internal and customer-facing applications to access transaction data.
- Deploy microservices to Linux environments, optimizing performance and ensuring continuous uptime using DevOps for CI/CD automation and continuous deployment processes.
- Set up comprehensive monitoring and alerting with Prometheus and Grafana, reducing system downtime and improving issue detection.
- Write unit tests using JUnit and Mockito, ensuring high-quality code and functionality.
- Developed Java applications with Spring Batch to archive files in Amazon S3 ECS and store metadata in Oracle/MySQL databases.
- Created REST APIs for customer-facing endpoints to retrieve archived documents from ECS instances.
- Implemented monitoring and alerting using Prometheus and Grafana to track system health and performance.
- Conducted black-box testing and PRT (Performance Regression Testing) with JMeter for APIs and batch jobs to ensure stability and scalability.
